DETAILED ACTION

Response to Amendment

This office action is in response to amendment filed on 6/17/10. Claims 1, 9, 12, and 17 have been amended.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Epstein on 8/1/11.

Claims

12. A non-transitory computer-readable storage medium including a communication program, wherein the communication program, when executed by a computer, makes the computer perform a method comprising:

detecting whether or not externally input user personal information has been stored in a storage medium;

transmitting available/unavailable request information identifying a broadcast station that broadcast received broadcast information, if said externally input user personal information was not detected in said storage medium in said detecting,

receiving available/unavailable information, showing whether or not an external device offers a service providing related information about contents included in the received broadcast information, in a reply to the transmitting said available/unavailable request information;

transmitting said externally input user personal information to the external device to request a user registration in accordance with said available/unavailable information, if said externally input user personal information was not detected in said storage medium in said detecting;

storing said externally input user personal information in said storage medium, if said externally input user personal information was not detected in said storage medium in said detecting; and

transmitting request information that requests said related information about the contents.

Allowable Subject Matter

2. Claims 1-5, 9, 12, and 14-20 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The invention of the current application pertains to a communication apparatus for receiving/providing related information about contents. Independent claim 1 recites: A communication apparatus, comprising: detection means for detecting whether or not externally input user personal information has been stored in a storage medium; communicative means for transmitting request information that requests related

information about contents included in received broadcast information, the communicative means transmitting a transmission of available/unavailable request information identifying a broadcast station that broadcast the received broadcast information, if said detection means detects that said externally input user personal information is not stored in said storage medium, the communicative means receiving available/unavailable information in a reply to the transmission of said available/unavailable request information, the available/unavailable information showing whether or not an external device offers a service providing said related information about the contents, the communicative means transmitting said externally input user personal information to the external device to request a user registration in accordance with said available/unavailable information, if said detection means detects that said externally input user personal information is not stored in said storage medium, wherein said detection means stores said externally input user personal information in said storage medium, if said detection means detects that said externally input user personal information is not stored in said storage medium. The claim recites specific steps for requesting information about contents received in a broadcast that is neither taught nor suggested by the prior art. Independent claims 9, 12, and 17 recite similar subject matter and are also allowable for these reasons and the reasons set forth in Applicant's response filed on 6/17/10.

Claim 12 has been amended to further define that the storage medium, which is illustrated in figure 1, item 1c and figure 10, item 1029, as "non-transitory" to eliminate any potential 101 issues.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
5. Antilla et al. (US 7,623,824) - Antilla discloses broadcast media bookmarks (title). Antilla teaches that when a user of a mobile device selects a radio bookmark (URL), a browser application sends a request to a broadcast station server, a session is established and a web page for the station containing information about the broadcast is displayed (column 5; column 6, lines 1-26). However, Antilla does not teach *inter alia* requesting whether information about the broadcast is available or not if externally input user personal information is stored in a storage medium.
6. Henrick (US 6,507,727) - Henrick discloses purchase and delivery of digital content using multiple devices and data networks (title). Henrick teaches that a user listens to a song broadcast by a radio station, and if he or she wishes to purchase the song, the user navigates to a web server, authenticates himself or herself, and identifies the station he or she is listening to. The web server then provides a user with a screen indicating information about the song for which the user can indicate a desire to buy the song or album (column 3, lines 25-40). However, Henrick does not teach *inter alia*

requesting whether information about the broadcast is available or not if externally input user personal information is stored in a storage medium.

7. Moran et al. (US 2004/0203406) – Moran discloses use of radio data service (RDS) information to automatically access a service provider (title). Moran teaches that a user terminal receives a broadcast with associated RDS information. A user may then request more information or purchase the song by sending a message containing some of the extracted RDS information to a service provider to a user (paragraphs 49-52). However, Moran does not teach *inter alia* requesting whether information about the broadcast is available or not if externally input user personal information is stored in a storage medium.

8. Kaneko (US 2002/0102954) – Kaneko discloses a broadcast receiver (title). Kaneko teaches that during reception of a program, a user may depress a bookmark button which invokes an additional information storing routine. If it is determined that additional information was obtained for the program, then the additional information is stored as bookmark data (paragraphs 55-57). However, Kaneko does not teach *inter alia* requesting whether information about the broadcast is available or not if externally input user personal information is stored in a storage medium.
